SUMMARY

Tech Lead and software engineer with 9+ years in software development and 2+ years leading teams — combining a product-management discipline (defining requirements, delivery process and quality standards, then evolving that process through the shift to agentic AI-assisted development) with hands-on engineering, embedding directly with the team rather than managing from a distance. Led day-to-day delivery for a cross-functional team of up to 12 engineers on ViiBE, Viirtue's white-label quote-to-cash platform, owning technical decisions and mentoring developers while remaining one of the top contributors to its 40+ microservice codebase. Led the billing and quoting platform now used by 180+ partners and processing close to \$1M in monthly recurring revenue, contributing to a \$10M Series A. Strong technical foundation in .NET, event-driven cloud-native microservices on GCP (GKE / Kubernetes) and AI integration in production, having worked AI-first with agentic tools like Claude Code. Focused on delivering reliable software, growing engineers and aligning technical work with real business value.

EXPERIENCE

Tech Lead · Viirtue

Jan 2022 – Jul 2026

Tech Lead

Nov 2023 – Jul 2026

- Led a cross-functional development team of up to 12 engineers — embedding directly with them as a hands-on contributor rather than managing from a distance — coordinating with stakeholders across the organization to deliver features effectively for ViiBE, Viirtue's white-label quote-to-cash platform — now adopted by 180+ partners (~65% of the partner base).
- Defined and evolved the team's delivery process and engineering discipline — requirements definition, sprint planning, code-review standards and QA gates — first for traditional development, then redesigning that process for agentic AI-assisted workflows (Claude Code) as the tooling matured, keeping quality and predictability high through the transition.
- Drove technical decisions and delivery across billing, quoting, reporting and AI features, owning architecture and prioritization while keeping the team aligned and unblocked; the billing platform now automates invoicing for 3,000+ accounts and close to \$1M in monthly recurring revenue, contributing to a \$10M Series A.
- Mentored teammates through pair programming and knowledge-sharing, fostering a collaborative environment where the team learns together and solves problems collectively.
- Led the AI voice agent product line end to end — quoting, per-call usage metering, cost calculation and automated billing for AI-powered calls — opening a new usage-based revenue stream.
- Oversaw the refactor of the entire reporting system into a more robust, standardized and functional solution, improving reliability and consistency across revenue, usage and accounts-receivable reports.
- Partnered directly with customers to resolve complex, account-specific issues, designing tailored solutions and improving customer satisfaction.

Software Engineer

Jan 2022 – Nov 2023

- Built and rebuilt core billing, quoting and payment systems (Stripe, Authorize.Net, e-signature) on saga-based, event-driven processing (MassTransit / RabbitMQ), powering automated invoicing for 3,000+ accounts, plus an AI voice-agent integration with usage-based billing.
- Maintained and operated a fleet of 40+ cloud-native microservices on GCP / Kubernetes (GKE) with Helm and Istio through a GitOps CI/CD pipeline, within an Nx monorepo, applying TDD and modern engineering practices.

Software Engineer · Inamika

Mar 2020 – Dec 2021

- Worked on an incremental web application using ASP.NET Core, ABP, MySQL and Angular to manage orders from different sources of sale.
- Developed a web application using ASP.NET Core, ABP, MySQL and Angular to measure company progress and growth.
- Helped improve infrastructure by implementing AWS services such as Lambda, EC2 and CloudTrail.

Software Engineer · WB Sistemas SRL

Jan 2016 – Feb 2020

- Introduced Scrum methodology in the company and acted as team leader for newcomer projects.

- Managed and developed ASP.NET MVC applications applying SOLID principles, Entity Framework and Angular for maintainable, scalable and testable software.
- Built a bus-ticket selling platform for “RosarioBus” using ASP.NET MVC, Entity Framework, Angular, TDD and Scrum.
- Developed an e-learning platform for “Fray Luis Beltrán” training centers using ASP.NET Core MVC, Entity Framework, Angular, TDD and Scrum.
- Built an e-commerce platform for “Wiener” and “Metrolab” to buy and sell blood-test machines and equipment, using ASP.NET Core MVC, Entity Framework, Angular, TDD and IdentityServer.

SKILLS

Leadership: Team leadership (up to 12 engineers), product & delivery process ownership, mentoring & coaching, cross-functional delivery, stakeholder management, technical decision-making

Languages: C#, JavaScript, TypeScript, Java, SQL

Backend: .NET / ASP.NET Core, Entity Framework Core, Dapper, MediatR, MassTransit / RabbitMQ, gRPC, Node.js, ABP, Spring/Hibernate

Frontend: Angular, NgRx, Tailwind CSS, Ionic, AngularJS, jQuery

Data: PostgreSQL, MySQL, SQL Server, BigQuery, Firebase

Cloud & platform operations: Google Cloud Platform (GKE), Kubernetes, Helm, Docker, CI/CD (GoCD, Argo CD / GitOps), AWS (Lambda, EC2, CloudTrail), Microsoft Azure

Integrations: Stripe, Authorize.Net, Rev.io, QuickBooks, ConnectWise, NetSapiens (UCaaS), tax engines (CSI / SureTax), AI voice agents, Keycloak / IdentityServer (SSO), LaunchDarkly / OpenFeature

Practices: TDD, SOLID, design patterns, event-driven microservices, saga orchestration, monorepos (Nx), feature flags, cloud-native, Scrum

AI tooling: AI-assisted development with Claude Code and GitHub Copilot — agentic workflows across the SDLC

EDUCATION

Systems Engineering (degree in progress) · UTN – FRRO 2017
Completed coursework for a Systems Engineering degree; two subjects remaining to obtain the degree.

Business-oriented High School Diploma · EEM 419 2011

SELECTED PROJECTS

- Linead Group — Web/mobile platform for medical appointments and a patient-tracking CRM, built with Node.js, Ionic, Angular and Firebase.
- Mountain Stream — Ingredients and raw-material tracking modules using ASP.NET Core MVC, Entity Framework, MediatR, TDD and AngularJS.
- Hoteliga — Payment-integration, reservation-calendar and identity/security modules for a hotel-management platform using ASP.NET (Core) MVC and AngularJS.

LANGUAGES & ACTIVITIES

Languages: Spanish (native), English (professional working proficiency — preparing for B2 First)

- Participated in several Model UN simulations as Ambassador and General Congress member.
- Developed multiple side projects as an entrepreneur, exploring new technologies and methodologies hands-on.
